

## Java

```
class Solution {  
    public boolean isArmstrong(int n) {  
  
    }  
}
```

---

## JavaScript

```
/**  
 * @param {number} n  
 * @return {boolean}  
 */  
var isArmstrong = function(n) {  
  
};
```

---

## TypeScript

```
function isArmstrong(n: number): boolean {  
  
};
```

---

## C++

```
class Solution {  
public:
```

```
    bool isArmstrong(int n) {  
    }  
};  
-----
```

## C#

```
public class Solution {  
    public bool IsArmstrong(int n) {  
    }  
}
```

## Kotlin

```
class Solution {  
    fun isArmstrong(n: Int): Boolean {  
    }  
}
```

## Go

```
func isArmstrong(n int) bool {  
  
}
```
